

The Global Value Chains and CEE Region

20th May 2021

Prof. Paweł Folfas

SGH Warsaw School of Economics

Prague/ online

PROGRAM

9.00 – 10.30

Part One: Traditional trade networks, simple global value chains and complex global value chains

- Introduction
- Fragmentation of production (“made in the world”) – example of production process of single good (e.g., a car, a smartphone)
- Introduction to trade in value added (TiVA) – explanation of the difference between gross exports and value-added exports based on example
- International trade in final goods – traditional trade networks
- International trade in intermediate and final goods – simple and complex global value chains
- Diagrams illustrating traditional trade networks vs. simple and complex global value chains

Break: 15 minutes

10.45 – 12.15

Part Two: Origin of value-added in exports

- Domestic value-added in exports
- Foreign value-added in exports
- Decomposition (geographic structure) of foreign value-added in exports
- Backward and forward participation in global value chains

Break: 45 minutes

13.00 – 14.30

Part Three: Value-added embodied in final demand

- Domestic value added embodied in foreign final demand (value-added exports)
- Direct and indirect domestic value added embodied in foreign final demand
- Foreign value-added embodied in domestic final demand (value-added imports)

The Workshop is organized under the project

The GVCs in Central Europe – a perspective of automotive sector after COVID-19

Project website: <https://gvcsv4.euba.sk/>

With the support of the Visegrad Fund, the workshop is free of charge.

Registration is required to join the event.
